

POLLUTING THE ENVIRONMENT - MANKIND NOT CLIMATE CHANGE IS RESPONSIBLE

Abalinx 3 October 2019 Peter Adamis

Let us step back a moment to reflect on what is at stake. Our quality of life is important. Mankind needs pollutant free oxygen, toxic free soil and clean water in order to survive. That being the case, then those doomsayers running about the global farm with their heads chopped off, are not focusing on what is important.

Our quality of life and that for our children has nothing to do with climate change. The words have been misconstrued, misrepresented and have created a climate of fear. First it was global warming then climate change and now some are being clever by calling the natural turn of events as climate shift.

We are not changing the world's climate, mankind may be creative, innovative and very clever, but nature has a mind of its own. If you ask any normal person in the street they will tell you that fresh air, clean water and a toxic free soil are more important for our wellbeing and longevity.

Mankind should be looking at better ways of managing our natural environment and not take it for granted. For example, if mankind is to clear the Amazon in South America, then at the same time work should be done on the Sahara desert in Africa planting billions of trees.

New and emerging green technologies are being funded and invented all the time, but implemented at a cost to the current generation. I am of the opinion that old and new technologies should work hand in hand and the old slowly being phased out. The Thames River (London) over 150 years ago was so polluted that people were becoming ill and dying. The Yarra River in Melbourne was also a cess pool as a result of the tanning industries once located near the bend in the Yarra River in Richmond.

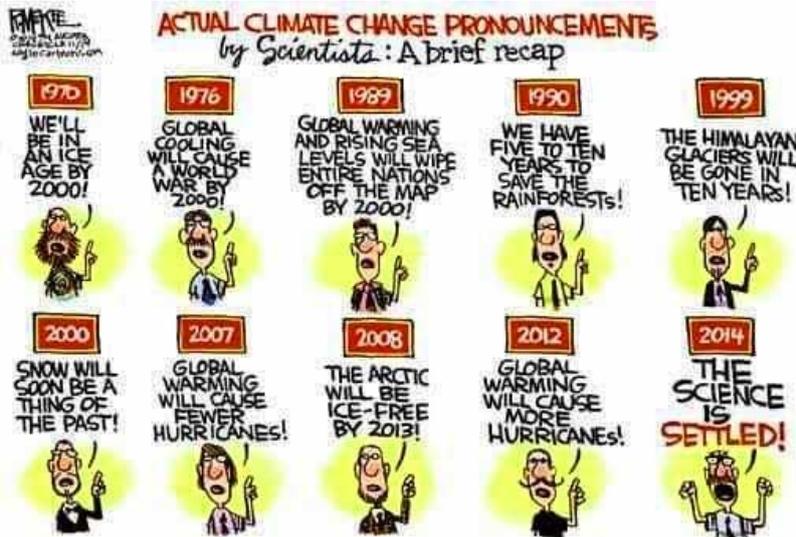

The air above New Jersey in the USA was so bad that people were almost choking to death. Mexico City from manmade toxic fumes was like a lid that heated up from the sun's rays created an unbearable environment for those living in the city. The Sahara desert was a lush jungle setting full of every kind of plant life very similar to what the Amazon is today. Mankind is responsible for his environment by being irresponsible. Toxic waste and fumes in the sky, plastic in the rivers and drains that lead to the ocean, chemicals in our soil.

Did the people of Australia realise that the largest employer in Australia is also the most responsible conservation organization. Yes, few would realise that the Department of Defence has been leading the charge in looking after the environment. China no longer a developing country and has emerged from its third world status to become a world power. It has achieved this at the expense of the environment. The Chinese more than often wear masks in major cities because of the polluted air.

India, Russia, countries in Asia and Europe are not immune from this malady. They all contribute to reducing our quality of life in one form or another. Australia with its small population is doing more than its fair share as a responsible global citizen. However the swift introduction of new technologies (without slowly phasing the old) had a devastating effect on the people. The Japanese now are talking of dumping all their nuclear waste into the Pacific Ocean. This on top of the nuclear power plant disaster. The Russians are not far behind them with their nuclear disaster at Chernobyl.

Plastic products in our oceans killing and disabling marine life. Plastic beginning appear in our food, preservatives in tinned products and our so called fresh fruit and vegetables. Then people begin to ask and question why there is a rise in cancers of all types. We are to blame not climate change. I don't others protesting and swearing in my face that it is my generation that is at fault.

Had this young sixteen year old Greta said this instead of telling the world "HOW DARE YOU", maybe she should have directed her comments to the industrialist and producers of such matters. The world has now seen a 90% decline in its bee population and people are wondering why.

The reason for the decline is the result of the toxic chemicals being used to control bacteria, small animals, fungus, diseases and stimulate plant growth. At this juncture we pause for breath to take in what we know. Climate change is not responsible for the diminishing resources nor for the erosion of the quality of life, mankind is! Records in changes in climate and in weather patterns have been kept for over 100 years. These reports however are not being used to adequately prepare Australians for the future.

Climate change is a hoax, a myth and certainly more about money rather than the environment. We will always have cyclones, changes in the weather, earthquakes, floods, volcanic actions, solar flares, tsunamis and change of seasons. If mankind is to survive, then mankind needs to consider the environment rather than lining their pockets. If not then the myth of climate change will become a reality in the minds of people.

Bottom line: Mankind is responsible for its own environment. Climate change, Global Warming or Climate Shift are mere words. We should be targeting those responsible for destroying our quality of life. New technologies should be introduced slowly with the old as discussed above.

Peter Adamis is a Journalist/Social Media Commentator and writer. He is a retired Australian military serviceman and an Industry organisational & Occupational (OHS) & Training Consultant whose interests are within the parameters of domestic and international political spectrum. He is an avid blogger and contributes to domestic and international community news media outlets as well as to local and Ethnic News. He holds a Bachelor of Adult Learning & Development (Monash), Grad Dip Occupational Health & Safety, (Monash), and Dip. Training & Assessment, Dip Public Administration, and Dip Frontline Management.
